

START YOUR CAREER THROUGH AN ELECTRICIAN APPRENTICESHIP!

A guide for young people.

DID YOU KNOW...

Do you like seeing how things work? Are you interested in green technologies? Do you want to learn a trade with excellent prospects? An electrician apprenticeship could be the perfect first step in your career. Electricians can work in lots of different places – from homes to offices to yachts! And as demand is high, you'll find good job security, independence and flexibility as you progress in your career.

AN APPRENTICESHIP IS A JOB WITH A SALARY

You'll also study the equivalent of one day per week to build skills in your chosen profession. The combination of practical work and classroom teaching means you can put into practice the things you learn. You'll gain skills such as communication, teamwork, problem solving and IT.

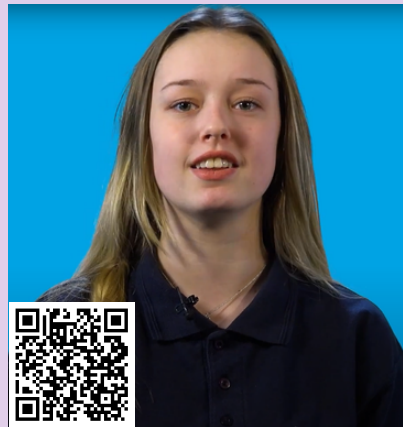

You'll be well on your way to achieving your career goals while others are just getting started.

MEET SOME APPRENTICES

MEET CORBIN...

who's earning money and having fun on site.

MEET KATIE...

who chose a career in construction over university.

MEET MYLES...

who is accelerating his career in electrics.

DURATION:
APPROX. 3.5 - 4 YEARS

WHERE COULD YOU WORK? ...ANYWHERE!

You could work in the local area you live or choose to travel, visiting people's homes or workplaces, venues and transport systems.

70% of our managers in technical roles first joined the company as apprentices. After gaining experience on site, some people rapidly progress into office-based or management roles or even teaching.

Clarkson Evans

ELECTRICIAN APPRENTICESHIPS EXPLAINED

There are two electrician apprenticeships to choose from:

DOMESTIC ELECTRICIAN

Installing systems and fixing faults in people's homes. (Approx. 3.5 years.)

INSTALLATION AND MAINTENANCE ELECTRICIAN

Installing systems and fixing faults in homes, businesses, and on construction sites. (Approx. 4 years.)

INSTALLATION AND MAINTENANCE ELECTRICIAN OR DOMESTIC ELECTRICIAN LEVEL 3

Electricians install, maintain and repair electrical systems. This can include power, heating, lighting, security systems and renewable energy technologies. Depending on which apprenticeship you choose, you may be working in homes, business premises, large venues or on construction sites.

TYPICAL TASKS INCLUDE:

- ▶ Preparing to work by looking at drawings and plans
- ▶ Installing wiring and electrical equipment
- ▶ Fixing electrical faults and replacing parts
- ▶ Inspecting and testing electrical installations to ensure safety
- ▶ Explaining complex problems to customers

After completing your apprenticeship you may choose to continue your employment or start your own independent business. Progression opportunities are available into a wide range of technical and commercial roles, including design, estimating and project management.
